

## DID YOU KNOW...?

Pennsylvania is home to 285 species of birds, including:

- 190 species that nest in PA.
- Twenty threatened and endangered species.

Hawk Mountain Sanctuary

## WHY AN ATLAS?

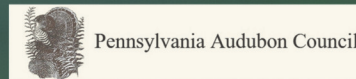

The PA Bird Atlas is the largest survey of birds in the state and is repeated every 20 years. The Atlas helps detect changes in bird populations, and ultimately informs conservation of birds and protection of habitat in PA.

Completing an Atlas is a huge task, but PA is home to many dedicated volunteer birders who make it possible!

## PA BIRD ATLAS PARTNERS

The PA Bird Atlas is a project of the Pennsylvania Game Commission and Hawk Mountain Sanctuary, in partnership with these other supporters.

## PENNSYLVANIA BIRD ATLAS

2024-2029

## WHAT?

The PA Bird Atlas uses data submitted from volunteer birders to describe the distribution and abundance of birds in PA.

## WHO?

The Atlas is for everyone! New and experienced birders can all participate.

## WHERE?

You can go birding and submit observations from anywhere in the state! Always obtain permission before birding on private land.

## WHEN?

- **Breeding birds** can be documented year-round, but most breeding bird surveys occur from April - August.
- **Wintering birds** will be surveyed from December - February, beginning Dec. 2024.

## HOW TO CONTRIBUTE?

### ✓ Go Birding

Whether you are out birding or just hanging out in your yard or in a neighborhood park, pay attention to birds and their behaviors.

### ✓ Submit Observations

All observations must be submitted to the Pennsylvania Bird Atlas portal in eBird. You can do this in the eBird app on a mobile device or online at [ebird.org/atlaspa/submit](http://ebird.org/atlaspa/submit).
